LABORATORY COMMENTS

Peripheral smear shows microcytic hypochromic red cells with mild anisocytosis. Findings may be associated with several conditions. HbA1c of 5.7 to 6.4 % is the commonly used prediabetes range. Values are interpreted using commonly used laboratory reference ranges. Clinical correlation and further investigations are advised at the discretion of the treating physician.

Note: A single test result should not be used alone to confirm a diagnosis. Please discuss this report with your doctor.
